Preface

Dynamic Substructures represents one of eight volumes of technical papers presented at the 37th IMAC, A Conference and Exposition on Structural Dynamics, organized by the Society for Experimental Mechanics and held in Orlando, Florida, on January 28–31, 2019. The full proceedings also include volumes on *Nonlinear Structures & Systems; Dynamics of Civil Structures*; *Model Validation and Uncertainty Quantification*; *Special Topics in Structural Dynamics & Experimental Techniques*; *Rotating Machinery, Optical Methods & Scanning LDV Methods*; *Sensors and Instrumentation, Aircraft/Aerospace, Energy Harvesting & Dynamic Environments Testing*; and *Topics in Modal Analysis &Testing*.

Each collection presents early findings from experimental and computational investigations on an important area within structural dynamics. Coupled structures or substructuring is one of these areas.

Substructuring is a general paradigm in engineering dynamics where a complicated system is analyzed by considering the dynamic interactions between subcomponents. In numerical simulations, substructuring allows one to reduce the complexity of parts of the system in order to construct a computationally efficient model of the assembled system. A subcomponent model can also be derived experimentally, allowing one to predict the dynamic behavior of an assembly by combining experimentally and/or analytically derived models. This can be advantageous for subcomponents that are expensive or difficult to model analytically. Substructuring can also be used to couple numerical simulation with real-time testing of components. Such approaches are known as hardware-in-the-loop or hybrid testing.

Whether experimental or numerical, all substructuring approaches have a common basis, namely, the equilibrium of the substructures under the action of the applied and interface forces and the compatibility of displacements at the interfaces of the subcomponents. Experimental substructuring requires special care in the way the measurements are obtained and processed in order to assure that measurement inaccuracies and noise do not invalidate the results. In numerical approaches, the fundamental quest is the efficient computation of reduced order models describing the substructure's dynamic motion. For hardware-in-the-loop applications, difficulties include the fast computation of the numerical components and the proper sensing and actuation of the hardware component. Recent advances in experimental techniques, sensor/actuator technologies, novel numerical methods, and parallel computing have rekindled interest in substructuring in recent years leading to new insights and improved experimental and analytical techniques.

The organizers would like to thank the authors, presenters, session organizers, and session chairs for their participation in this track.

Växjö, Sweden — A. Linderholt

Albuquerque, NM, USA — R. Mayes
Garching, Germany — D. Rixen

Contents

1 **Using Laser Vibrometry for Precise FRF Measurements in Experimental Substructuring** 1
Francesco Trainotti, Tobias F. C. Berninger, and Daniel J. Rixen

2 **A Priori Interface Reduction for Substructuring of Multistage Bladed Disks** 13
Lukas Schwerdt, Lars Panning-von Scheidt, and Jörg Wallaschek

3 **Using Hybrid Modal Substructuring with a Complex Transmission Simulator to Model an Electrodynamic Shaker** 23
Benjamin Moldenhauer, Matt Allen, Washington J. DeLima, and Eric Dodgen

4 **Hybrid Substructure Assembly Techniques for Efficient and Robust Optimization of Additional Structures in Late Phase NVH Design: A Comparison** 35
Benjamin Kammermeier, Johannes Mayet, and Daniel J. Rixen

5 **Workpiece Coupling in Machine Tools Using Experimental-Analytical Dynamic Substructuring** 47
Prateek Chavan, Christian Brecher, Marcel Fey, and Matthäus Loba

6 **Mechanical Characterization and Numerical Modeling of High Density Polyethylene Pipes** 57
Mehrzad Taherzadehboroujeni and Scott W. Case

7 **Study on Dynamic Stiffness Characteristic of Primary Suspension for High-Speed EMU** 67
Xiugang Wang, Xiaoning Cao, Ai qin Tian, Jian Su, Wei Xue, and Shen Zhan

8 **Test-Based Modeling, Source Characterization and Dynamic Substructuring Techniques Applied on a Modular Industrial Demonstrator** 73
A. M. Steenhoek, M. W. van der Kooij, M. L. J. Verhees, D. D. van den Bosch, and J. M. Harvie

9 **Development of a Low Cost Automatic Modal Hammer for Applications in Substructuring** 77
Johannes Maierhofer, Ahmed El Mahmoudi, and Daniel J. Rixen

10 **Using SEMM to Identify the Joint Dynamics in Multiple Degrees of Freedom Without Measuring Interfaces** 87
S. W. B. Klaassen and D. J. Rixen

11 **Overview of Free Interface Substructuring Approaches for Systems with Arbitrary Viscous Damping in Dynamic Substructuring** 101
Fabian M. Gruber, Dennis Berninger, and Daniel J. Rixen

12 **Model Updating of Fluid-Structure Interaction Effects on Piping System** 133
Srijan Rajbamshi, Qintao Guo, and Ming Zhan

13 **Vehicle Driveline Benchmarking to Support Predictive CAE Modeling Development** 141
J. Furlich, J. Blough, and D. Robinette

14 **A Proposal of Dynamic Behaviour Design Based on Mode Shape Tracing: Numerical Application to a Motorbike Frame** 149
Elvio Bonisoli, Domenico Lisitano, Luca Dimauro, and Lorenzo Peroni

15 Rapid Seismic Risk Assessment of Structures with Gaussian Process Regression 159
Mohamadreza Sheibani, Ge Ou, and Shandian Zhe

16 Modeling Rail-Vehicle Coupled Dynamics by a Time-Varying Substructuring Scheme 167
Luigi Carassale, Paolo Silvestri, Roald Lengu, and Paolo Mazzaron

17 Planning of a Black-Box Benchmark Structure for Dynamic Substructuring..... 173
D. Roettgen and A. Linderholt

18 Study on the Technology of Reliable Life Prediction of Plate Heat Exchanger for Ship 177
Longbo Liu, Na Han, Lingli Fu, and Jun Yao

19 Real-Time Hybrid Substructuring Results of the Mars Pathfinder Parachute Deployment..... 183
Michael J. Harris and Richard E. Christenson
